

1. Create empty files using **touch** cmd under your **home** directory
 - Xyz1-abc
 - Xyz2-abc
 - Xyz3-abc
 - .
 - .
 - .
 - Xyz9-abc
2. Display only these files using **ls -l** (tip: use wild characters - * or ?)
3. Move the files xyz1-abc, xyz2-abc, xyz5-abc to CEO/VP people /HR lead using **mv** cmd
 Note: in order to create directory with **space** use "VP People" or VP\ People
4. Copy the files xyz3-abc ...xyz6-abc to CEO/VP Sales/Sales Lead
5. Rename the files in 'HR lead' to People, Address, Contact
 (xyz1-abc as People and so on)
6. From your home directory, Use **find** cmd to find the file People
7. Now use **locate** cmd to find the Contact file.
 Note: If new files are created, run **updatedb** cmd as root user.
8. Use **Echo** cmd to display "This is my world !!"
9. Write the output of 8 into the file – People
10. Display the contents of the file People using **cat** cmd
11. Append "My world revolves around Linux" into People.
12. Display the contents of the file People using **cat** cmd
13. Under your user directory, run **ls -l** cmd and write the output into **FileInfo** File.
14. Display the contents of the file **FileInfo** using **cat**, **less**, **more**, **head** and **tail** cmd –
 Observe the difference between the display cmds used.
15. Use **rm** cmd to remove **directories** and **files**
16. Use **rmdir** cmd to remove **directories**
17. Use **history** cmd to get a list of all the cmds used and input that to a file.
